senior partners in cell and tissue imaging

Histology Project Leader

Full-Time Flexible Working Based In Europe

To meet a dramatic increase in incoming requests for support from our customers within the Biotechnology and Pharmaceutical industry, we are looking to immediately strengthen our team of scientists with this new role.

We invite all suitable candidates to apply and with our work-from-home flexibility, you can be based anywhere in Europe. With an expectation to get to know your team through quarterly visits to our site at Södertälje, Sweden.

As project leader you will experience an exciting, engaging, fast moving, and changing working environment where you will be tasked to coordinate one or several of our projects conducted on behalf of international Pharma project teams in many different therapy areas and with a multitude of exciting new project challenges.

Responsibilities:

Take a lead role in the complex co-ordination of all activities in specific research projects, in close dialogue with the Customer and the whole Offspring Team. The work spans all aspects of the project pipeline, from the early discussions with customers, where the study design is planned and defined, through to execution and reporting of the agreed studies, and onto the post-project phases where communications with customers are maintained and nurtured.

The work as a Project Leader requires an independent approach to pro-actively identify and solve problems in connection with experiments, as well as working collaboratively to empower our Team, leverage platforms and share resources, ensuring the highest standards of project management support to individual projects, and evangelizing the work of the Team both internally and externally.

The Offspring Team has a clear focus based on a deep technical understanding: of the data quality requirements when serving pharma R&D teams, of internal

workflows for the entire Team, and of the technical/analytical portfolio we are working with. Therefore, it is important that you enjoy collaborating and can play a central role in formulating strategy, including identifying and prioritizing specific scientific goals.

At Offspring, we constantly strive to get better at what we do, and we work purposefully to constantly improve the quality and reliability in the data and services we deliver to our customers.

Requirements:

- PhD level degree with a minimum of 5 years of post-graduate working experience
- Solid skills from planning and executing research studies, using various histopathology-based technologies (e.g., immunohistochemistry and in situ hybridization histochemistry, receptor autoradiography, digital pathology, and image analyses)

Other meritorious experiences / skills:

- Prior skills from conducting research in the areas of oncology, neurology, inflammatory or respiratory disorders is a merit. Experience from work in pharmaceutical R&D or CRO settings is desirable
- High customer-orientation and business acumen
- Ability to organize several projects simultaneously and keep an eye on the details
- Strongly developed networking, communication as well as analytical skills
- Interpersonal skills as well as the will and ability to cooperate with people from other Offspring units and managerial levels
- Focus on delivering towards the overriding vision as well as strategic and financial goals of the company

The position is a permanent full-time employment offering flexible working.
